

## DECK SCALER

### DECK SCALER

The Trelawny SF11 Multi-headed Deck Scaler is for use on steel deck and floor surfaces and is ideally suited for thick coating removal and surface preparation on large areas of deck and tank floor cleaning, complimenting the hand held Scaling Hammer range. Eleven heads impacting at 3000 blows per minute break down the hardest of coatings.

Applications include breaking down hard coatings prior to floor blast cleaning (reduces cost of spent blast media), marine industry (for removing rust, scale and paint from ship decks) and chemical industry (de-scaling the bottom of tanks).

The multi-position handle allows easy transportation and access under obstructions and the low vibration of 5.76m/s<sup>2</sup> reduces the risk of vibration related injuries and reduces operator fatigue. A model with a durable light weight vacuum shroud is available where control of dust is necessary.
